
Title: Schematics

Author: Cousteau Perron

There are dozens of extremely detailed schematic drawings along the edges of the paper, and mixed throughout the notes. The writing seems somewhat disjointed, and the hand it's written in is a very jagged and harsh one.

Pressure differential needs to be overcome to ensure test subject survival. Initial attempts resulted in implosion twice, leaks and catastrophic failure five times. Cold temperature survival gear. Research suitable material.

Homogenous distribution necessitated to maximize survival...supply carrying object? Possibly some sort of air elemental hybrid magic utilizing clockwork principles...
